

West Gippsland Rainfall Outlook – 11th September 2025

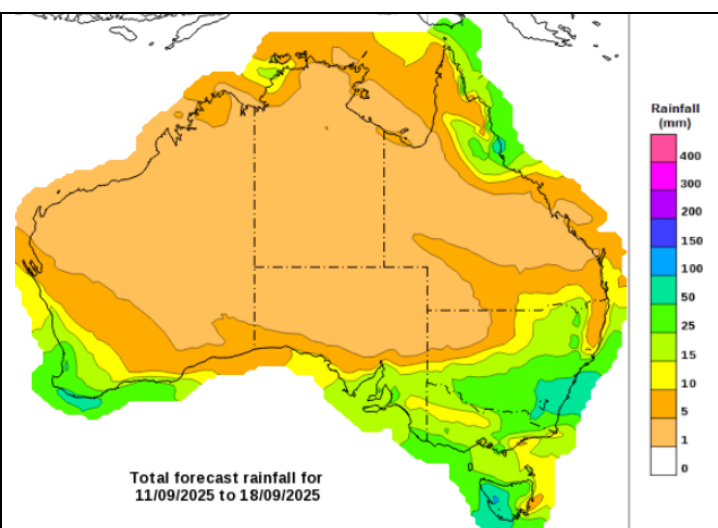

Past Rainfall

- September rainfall totals have been minimal - particularly in East Gippsland.
- Soil moisture remains very much below average for the season.
- See: [Recent and historical rainfall maps](#)
- [Australian Water Outlook](#)

Outlook

- 15-20 mm of rain is forecast for West Gippsland over the eight days to 18th September 2025.
- There is about a 60-70% chance of above median rainfall for the following two weeks of September (15th - 28th)
- See [Water and the Land: Forecast Rainfall](#) or [MetEye](#)

- The October to December outlook for West Gippsland indicates a 60-70% chance that rainfall will exceed the historical median.
- There are a wide range of possible rainfall outcomes, but model runs are biased towards wetter than normal conditions.
- There is a 75% chance of at least 200 mm of rain over most of West Gippsland between October and December.
- See [Rainfall - The chance of above median for August to October - Climate Outlooks](#)
- This [video](#) provides information on using long-range forecasts:
