# Weekly pasture growth and evapotranspiration

utas.edu.au/tia

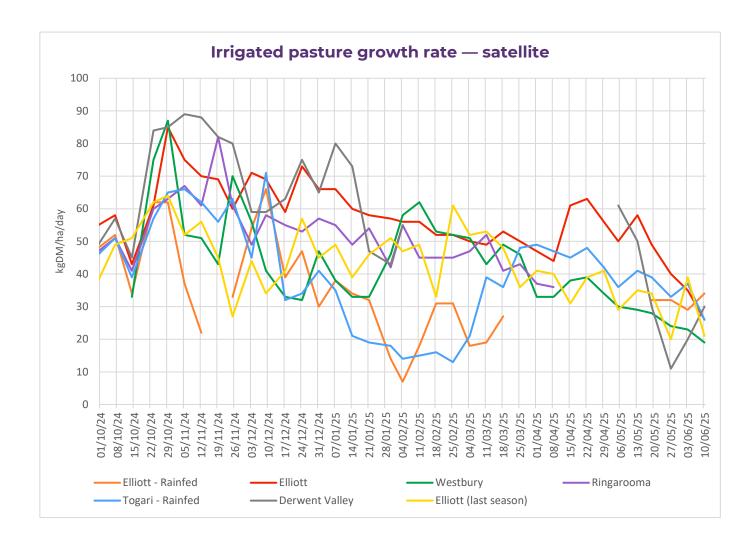

Author: Leah Davies & Jacob Lightman

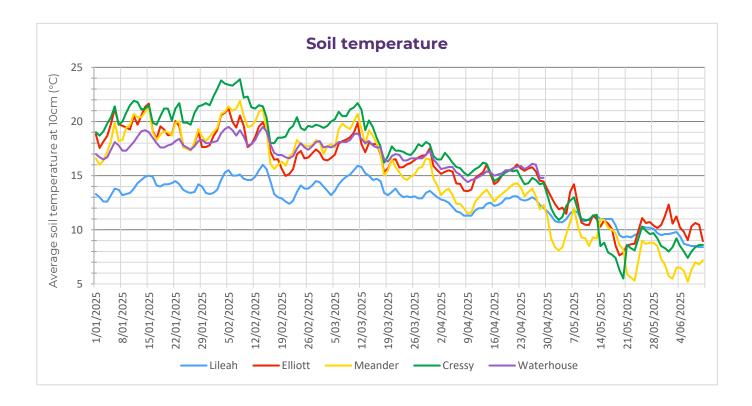

## **Regional pasture growth rates**

Region	Pasture growth rate (kg DM/ha/day) - Satellite					
	Irrigated	Dryland				
Togari	26					
Elliott	26	34				
Westbury	19					
Ringarooma	-					
Derwent Valley	30					

Pasture growth rates vary between farms for many reasons, including climate, soil type, nutrient availability and management. Satellite pasture growth rates are sourced from Pasture.io (<u>https://pasture.io/</u>).

Leaf emergence rate at Elliott									
Leaf emerge (days per lea		Days to 2 leaf stage	stage Days to 2.5 leaf stage Days to 3 leaf stage						
Irrigated	13	26	32.5	39					

# Weekly evapotranspiration and rainfall

Location	ET₀¹ (mm)	Rainfall (mm)	Rainfall (month- to-date; mm)	Soil temp (°C) 9:00 a.m. @ 10 cm
Pegarah (KI)				
Lileah	3.2	32.8	50.0	8.4
Elliott	6.6	38.0	50.8	8.9
Meander	6.3	32.8	34.8	7.2
Cressy	4.9	30.4	32.6	8.6
Ringarooma				
Waterhouse				

Wednesday, 4 June to Tuesday, 10 June 2025

Data for this table is collected from the <u>UNITAS Weathermation weather stations</u> at Lileah, Elliott (Tasmanian Dairy Research Facility), Meander (Clear Springs) and Waterhouse (Forester Lodge). These weather stations have been installed on <u>Smarter Irrigation for Profit II</u> optimised irrigation farms. Data for Pegarah (King Island) and Ringarooma is sourced from the Ag Logic Weather Station and Probe Network (<u>https://www.aglogic.com.au/</u>)

 $^{1}$ ET<sub>0</sub> is the reference evapotranspiration, an estimation of the evapotranspiration from the "reference surface" – grass with an assumed height of 0.12m.

Note: We are currently unable to access data for Pegarah, Ringarooma, and Waterhouse. We're working on bringing this back online.

#### Monday, 3 June to Sunday, 9 June 2025

Location	ET₀¹ (mm)	Rainfall (mm)	Rainfall (month- to-date; mm)	Soil temp (°C) 9:00 a.m. @ 10 cm
Ouse	3.3	9.2	9.2	

Climate data for Ouse is collated from <u>www.bom.gov.au</u>. It is displayed in a different table because the date that data is available is different to the UNITAS Weathermation stations.

\* Soil temperature information for Ouse is currently unavailable.

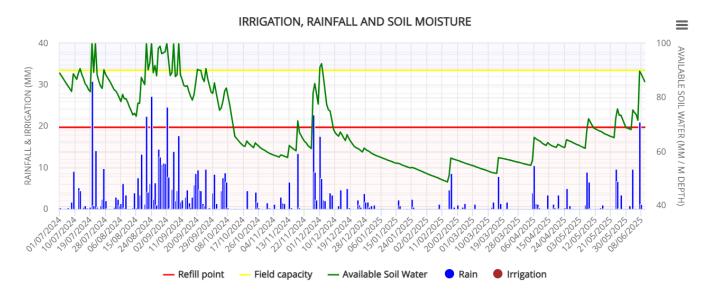

# Soil moisture budgets

The soil moisture budgets below have been produced using IrriPasture (<u>https://irripasture.com/</u>). This is a free budgeting tool that can help you make decisions about your irrigation scheduling. This report has budgets for Bushy Park/Ouse, Scottsdale, Meander, Sheffield, Elliott and Lileah. The graphs show the available soil moisture (green line). The aim is to keep this green line between the red line (refill point) and the yellow line (field capacity). The distance between the yellow and red line is how much Readily Available Water (RAW) the soil holds. The amount of RAW your soil can hold will depend on your soil type. As a guide, the amount of RAW that is held in the top 30 cm for common soil types is:

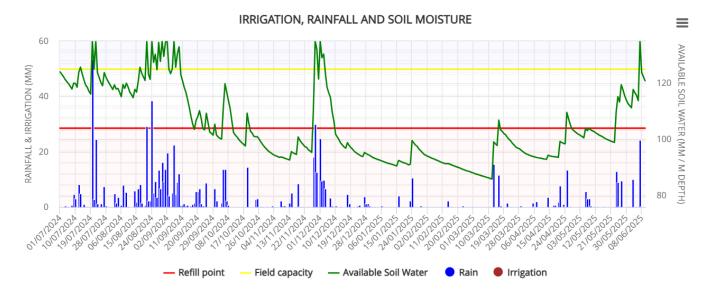

- Sand = 9 mm
- Loamy sand = 15 mm
- Sandy loam = 21 mm
- Loam = 27 mm
- Clay = 15 mm
- Clay loam = 24 mm

The soil moisture budgets in this report have used an 'average' RAW value of 21 mm. If your soil holds less soil moisture than this, you will need to irrigate earlier than the water budget indicates. If your soil holds more moisture than this, you probably don't need to irrigate as soon. **THESE SOIL MOISTURE BUDGETS ARE A GUIDE ONLY**. Please do a physical check of the soil moisture on your farm to help make the decision when to start irrigating.

# 7-day forecasts

The following tables present the 7-day evapotranspiration, rainfall, temperature, humidity, and forecast for key dairy regions in Tasmania. The data is sourced from the Weatherwise Watering Swan Systems (<u>https://www.swansystems.com.au/irrigation-harnessing-power-of-data/</u>)

## Elliott

Date	ETo* mm	Chance of Rain %	Rain Range mm	Rain Estimate mm	Temp Range °C	Avg R. Humidity %	Avg Wind Speed km/hr

## Leaf emergence rate

This graph shows the leaf emergence rate in days per leaf for the past two seasons compared to the current season. The numbers directly below the graph (1-52) represent the weeks in the financial year. Week 1 is the first week in July, Week 52 is the last week in June.
